Brewer Design Unveiling New ESD Industrial Seating

Milwaukee, WI – Brewer Design announces the addition of a new Electro-Static Dissipative (ESD) stool to its industrial product line. The ESD Seating will be available in Polyurethane, Vinyl and Cloth.

Brewer Design's durable and ergonomic line of ESD Seating exceeds the National Fire Protection Association standards by averaging 1×10^8 Ohms of resistance on Polyurethane and 1×10^6 Ohms Vinyl and Cloth. All three models offer the same great quality and comfort.

Electro-Static Discharge (ESD) can build up as easily as walking across a carpeted floor or by clothing material rubbing together. The danger that ESD poses encompasses starting fires and severely damaging electrical components.

The ESD stool is an innovative product that will increase safety and productivity in the work place. This stool features a contoured waterfall seat for improved leg circulation, has three standard height options and is available in cloth, polyurethane or vinyl.

In addition to the high quality craftsmanship, a 12-year warranty is offered with the new line of products which is standard across the entire Brewer Design Industrial product line.

To receive additional information on this new product or to be connected with a distributor in your area, please contact Customer Service at 1-800-558-8934 or visit us on the web at www.brewer-design.com.
